

Did you know there's more than **10 types** of clouds?  
Here's what some of the common ones look like.

**Cumulus**

Fluffy, single clouds that float in a blue sky. The most common type.

**Alto cumulus**

These clouds take up the whole sky, with wavy lines, often they appear at sunset

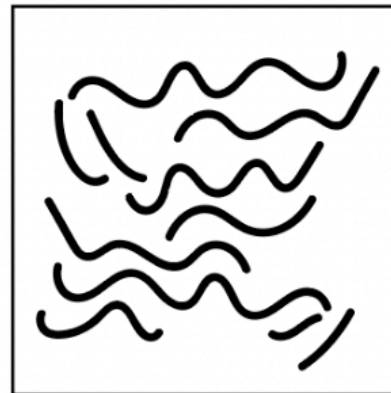

**Cirrus**

Feathery, wispy, clouds that can be almost transparent

**Cumulonimbus**

These giant clouds take up almost the whole sky and contain storm clouds

**Stratus**

Dense clouds that make the whole sky gray, fog is just low floating stratus clouds!

What kind of clouds are in the sky today?
